## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, 26-30 and 33, drawn to optical packet switching where bit rate corresponds to output wavelength, classified in class 398, subclass 51.
  - II. Claims 15-22, 31 and 32, drawn to polarization multiplexing to mediate bandwidth contention, classified in class 398, subclass 65.
  - III. Claims 23-25 are drawn to bit rate-conversion, classified in class 370, subclass 914.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the optical packets can be switched without requiring polarization multiplexing. The subcombination has separate utility such as optical multiplexing to resolve bandwidth contention.
3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

Art Unit: 2633

case, the combination as claimed does not require the particulars of the subcombination as claimed because the packets can be switched without bit rate conversion. The subcombination has separate utility such as increasing the bit rate of an optical signal.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for each of Group II and Group III is not required for Group I, restriction for examination purposes as indicated is proper.
